

# JORGE MIRANDA BERRIOS

Software Engineer · Backend · Java · Spring Boot · Kafka

Santiago, Chile | jmirandev@gmail.com | linkedin.com/in/jmiranda-berrios

## SUMMARY

Software engineer with 4+ years of experience building high-volume systems for e-commerce, stock exchanges and payments. Backend-focused with Java, Spring Boot, Kafka and Redis, plus experience in frontend (TypeScript, Angular), data pipelines and AI-assisted development. I make design decisions autonomously and work comfortably between code and business: I turn stakeholder needs into technical decisions and explain those decisions clearly to non-technical audiences.

## EXPERIENCE

### Software Engineer (Mid-level)

Jan 2026 – Jul 2026

*Mercado Libre*

*Hybrid, Santiago*

- Cut the response time of a critical endpoint from 13 s to 2 s (–85%) in a flow handling 50M+ requests per hour, by parallelizing sequential operations with Spring WebFlux.
- Built and maintained high-traffic backend microservices, taking part in production monitoring, alerting and incident response, and in initiatives to reduce on-call alerts.
- Built an AI harness around Claude Code for working in large codebases: custom skills for bug investigation and refactoring, persistent memory, functional-testing tools and lower token usage. It helped me pinpoint the root cause of the 13 s endpoint.
- Validated code, both hand-written and AI-generated, with CRAP-metric and cyclomatic-complexity quality gates, keeping 100% code coverage.

### Software Engineer

Jan 2024 – Jan 2026

*Gatblac – NUAM team (stock exchange of Chile, Peru and Colombia)*

*Remote, Chile*

- Designed and built end to end, with no Tech Lead or architect assigned, the exchange's buy-order cancellation system with Java 17, Spring Boot 3 and Kafka, handling 10,000 requests per minute (the engine's maximum).
- Handled in a single design both the automatic cancellation flow for Chile and Peru (~200 ms) and Colombia's manual process, integrating its asynchronous responses through sockets, Kafka and webhooks.
- Optimized communication between the exchanges' legacy engines and the Nasdaq engine, reducing response time from 5 s to 200 ms (–96%).
- Integrated each exchange's legacy logic into the NUAM engine through event-driven microservices (Kafka, Redis) deployed on Kubernetes.
- Translated business requirements and technical decisions for non-technical stakeholders in a Scrum team.

### Specialist Consultant

Jan 2022 – Jan 2024

*IBSS Consulting SpA – ITAM and APIPAY teams*

*Remote, Chile*

- Built integrations between the BCI and MACH payment methods and POS systems, and completed the MACH certification; the solution was later adopted by two major pharmacy chains in Chile.
- Implemented ETL pipelines with Dataflow and BigQuery (GCP), processing about 2 million records per run, integrating MySQL sources through microservices and Pentaho.
- Developed frontend features with TypeScript and Angular for the ITAM team.

## EDUCATION

**Computer Engineering** (Ingeniería en Informática) – Duoc UC

Graduated, 2024

**Physics and Mathematics Teaching** – Universidad de Santiago de Chile

Not completed, 2018

## TECHNICAL SKILLS

**Languages:** Java (8, 11, 17), TypeScript, JavaScript, Python

**Backend:** Spring Boot, Spring WebFlux (reactive programming), REST APIs, SOAP, microservices, event-driven architecture

**Databases:** SQL, PostgreSQL, MySQL, BigQuery, NoSQL

**Messaging and data:** Kafka, Redis, Dataflow, Pentaho, ETL

**Cloud and DevOps:** GCP, Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins), Git, Swagger / OpenAPI

**Quality and practices:** SOLID, Clean Architecture, unit testing, code coverage, CRAP metric, code review, Scrum

**AI-assisted development:** Claude Code, Codex, Cursor, Windsurf, GitHub Copilot

**Languages spoken:** Spanish (native) · English (intermediate)
